

# TRACK LAB ORDERS IN REAL TIME— DIRECTLY IN EPIC®

No portals. No follow-up calls. Full visibility from order to result.

Real-time order status tracking for the Cologuard® test and other lab tests is now visible directly within Epic, without exiting the existing workflow.

## WHY THE ORDER STATUS TRACKER MATTERS

- Real-time visibility into lab order milestones is accessible within the existing workflow.
- Order progression tracking from collection through final result.
- A visual tracker embedded in Chart Review or Lab Report.

Example of the Order Status Tracker as it appears in Epic's Chart Review.

The labels and milestone progression displayed in the tracker are customizable and will vary based on how each organization's unique Epic environment maps the incoming messages to tracker events.

## When the Order Tracker May Help

Check if a lab specimen has been collected

Investigate delayed or missed results

Respond to patient inquiries

Monitor Cologuard workflows

## WHERE TO FIND IT

Beginning with the February 2025 version, Epic® provides real-time visibility into lab order progression through milestone tracking embedded in Chart Review, mirroring familiar delivery tracking workflows.

- **No Add-ons:** This is a native feature already built into Epic, requiring no new integrations.
- **Auto-activated:** If the tracker is not yet visible, your Epic administrator can enable by adding print group **76217** in the Chart Review or Lab Reports.
- **No Setup:** Existing Exact Sciences data flows already support the tracker, so no further configuration is needed.

The screenshot displays the Epic Chart Review interface. The top navigation bar includes tabs for Synopsis, Rooming, Screenings, MAR, Immunizations, and This Visit. The main content area is titled 'Chart Review' and features a sub-navigation bar with options like Encounters, Notes, Labs, Imaging, Cardiology, Procedures, Meds, LDAs, Media, Letters, Episodes, Referrals, Other Orders, and Snapshot. Below this, there are filters for 'Hide Canceled', 'w/Results', 'In Process', 'Micro', 'Pathy/Cyto', and 'Genomic Orders'. A table lists recent lab orders with columns for 'A... R...', 'Date/Time', 'Test', 'Abnormal?', and 'Status'. The 'Order Tracking' section shows a progress bar with three stages: 'Ordered' (3/17 9:59 AM), 'Collected', and 'Final Result'. Below the progress bar, there are links for 'Order Report' and 'Reprint Order Requisition' for the 'Cologuard® colon cancer screening' (Order #1234567) on 3/17/26.

Example of the tracker displayed during an active Cologuard test screening order
